                                                                                                                                                                                                                                                   USA
```

clone. It may be shorter because we only sequence overlapping clone sections once, or longer because we provide a small overlap between neighboring data submissions. This sequence may not represent the entire insert of this

This sequence was finished as follows unless otherwise noted: all regions were double stranded, sequenced with an alternate chemistry, or covered by high quality data (i.e., phred quality > 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by sequence from more than one subclone; and the assembly was confirmed by restriction digest.

MAPPING INFORMATION:

Mapping information for this clone was provided by Dr. John D. McPherson, Department of Genetics, Washington University, St. I MO. For additional information about the map position of this sequence, see http://genome.wustl.edu/gsc Louis

NEIGHBORING SEQUENCE INFORMATION:
The clone sequenced to the left is RP11-350H15; the clone sequenced to the right is ACO34121. Actual start of this clone is at base position 1 of RP11-420C9; actual end is at base position 204230 of SOURCE INFORMATION:
The RPCI-11 human BAC library was made from the blood of one male donor, as described by Osoegawa,K., Woon,P.Y., Zhao,B., Frengen,E., Tateno,M., Catanese,J.J. and de Jong,P.J. (1998) An improved approach for construction of bacterial artificial chromosome libraries. Genomics 51:1-8. The clone may be obtained either from Research Genetics, Inc. (http://www.resgen.com) or Pieter de Jong and coworkers at the Roswell Park Cancer Institute (http://bacpac.med.buffalo.edu) position 1 RP11-420C9 pBACe3.6

repeat_region source of PCR product from clone DNA. represents sequence of a single amplification of clone DNA. sequence RP11-420C9 from base position 44230 to 46506 consists PCR product from clone DNA. Base position 44700 to 44774 resents sequence of a single plasmid subclone derived from PCR /rpt_family="Alu" 890. .1082 /clone_lib="RPCI-11" 179. .486 /organism="Homo sapiens" /db_xref="taxon:9606" /clone="RP11-420C9" /map="2" /chromosome="2" Location/Qualifiers

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   corresponding to the overlapping clone, as we submit sequences with only a small overlap as described above.

This sequence was finished as follows unless otherwise noted: all regions were either double-stranded or sequenced with an alternate chemistry or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by at least one plasmid subclone or more than one M13 subclone; and the assembly was confirmed by restriction digest. The following abbreviations are used to associate primary accession numbers given in the feature table with their source databases: Em: RMSE; Sw:, SWISSPROT; TT:, TREMBL; WP:, WORMPEP; Information on the WORMPEP
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Cambridgeshire, CB10 1SA, UK. On May 14, 2002 this sequence version replaced gi:19068263.
During sequence assembly data is compared from overlapping clones.
Where differences are found these are annotated as variations
together with a note of the overlapping clone name. Note that the
variation annotation may not be found in the sequence submission
                                                                                                                                                                                                                                                                                                                                                                                                                                                          from the RPCI-23 Mouse PAC Library
constructed by the group of Pieter de Jong.

Summary Statistics

Assembly program: XGAP4; version 4.5

Sequencing vector: plasmid; LO87S2; LO08 of reads

Sequencing vector: plasmid; LO87S2; LO08 of reads

Chemistry: Dye-terminator Big Dye; LO08 of reads

Consensus quality: 11639 bases at least Q30

Consensus quality: 116315 bases at least Q30

Consensus quality: 116470 bases at least Q20

Insert size: 116614; sum-of-contigs

Insert size: 116670; 7.2% error; agarose-fp

Quality coverage: 6.37x in Q20 bases; sum-of-contigs Qua

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         source
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         This sequence is the entire insert of clone 263J7. This sequence has been finished according to sequence map criteria as follows. attempt is made to resolve all sequencing problems, such as compressions and repeats, but not necessarily within known annotated human repeat sequence elements (e.g. Alu). Where the sequence is ambiguous, there is an annotation using the 'unsure'
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              requests: clonerequest@sanger.ac.uk
on Jun 7, 1999 this sequence version replaced gi:4835284.
During sequence assembly data is compared from overlapping clones.
Where differences are found these are annotated as variations
together with a note of the overlapping clone name. Note that the
variation annotation may not be found in the sequence submission
corresponding to the overlapping clone, as we submit sequences with
only a small overlap as described above.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      AL049545

Isak,A., Elliott,G., Doebber,A., Abbott,A., Hawkins,M. and Falk,A.
The sequence of Homo sapiens BAC clone RP11-629B4
Unpublished
all regions were double stranded, sequenced with an alternate chemistry, or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by sequence

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 FEATURES
```

restriction more than one subclone; and the assembly was confirmed γď

MAPPING INFORMATION:
Mapping information for this clone was provided by Dr. John D.
Mapping information for this clone was provided by Dr. John D.
McPherson, Department of Genetics, Washington University, St. Louis
MO. For additional information about the map position of this
sequence, see http://genome.wustl.edu/gsc

SOURCE INFORMATION:

The clone sequenced to the left is RP11-45219, 200 bp overlap; the clone sequenced to the right is RP11-317J9. Actual start of this clone is at base position 195 of RP11-629B4; actual end is at base position 162471 of RP11-629B4. donor, as described by Osoegawa, K., Woon, P.Y., Zhao, B., Frengen, E., Tateno, M., Catanese, J.J. and de Jong, P.J. (1998) An improved approach for construction of bacterial artificial chromosome libraries. Genomics 51:1-8. The clone may be obtained either from Research Genetics, Inc. (http://www.resgen.com) or Pieter de Jong and coworkers at the Roswell Park Cancer Institute The RPCI-11 human BAC library was made from the blood of one male NEIGHBORING SEQUENCE INFORMATION: (http://bacpac.med.buffalo.edu)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       NOTE: Estimated insert size may differ from sequence length (see http://www.hgsc.bcm.tmc.edu/docs/Genbank_draft_data.html).

NOTE: This is a 'working draft' sequence. It currently consists of 73 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are persented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Sequencing vector: plasmid; chemistry. Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Human secreted proteins have activities based on the tissues CC and cells the genes are expressed in Examples of activities include: CC cytostatic; immunosuppressive; nootropic; neuroprotective; antiviral; CC antiallergic; hepatotropic; antidiabetic; antifungal; antiparasitic; and CC cardiant. The polynucleotides and polypeptides are useful for CC preventing, treating or ameliorating a medical condition in e.g. humans, CC mice, rabbits, goats, horses, cats, dogs, chickens or sheep: The CC useful for chromosome identification. They are also useful as probes for CC particularly breast and/or ovary cancer. They are also useful as probes for CC diagnosing a disorder related to the female reproductive system, CC addiovascular disorders, wound healing, neurological diseases and CC infectious disease. AAC59957 to AAC59965 and AAB34772 represents sequence CC used in the exemplification of the present invention.

Criptophilde (II) sequences. (I) is useful as hybridisation probes, polymerase chain reaction (PCR) primers, oligomers, and for chromosome CC polymerase chain reaction (PCR) primers, oligomers, and for chromosome CC and gene mapping, and in recombinant production of (II). The CP primers of the primers, and for chromosome CC contitiving expressed genes. (I) is useful in gene therapy techniques CC for identifying expressed genes. (I) is useful in gene therapy techniques CC (II). (II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as CC a food supplement. (II) and its binding partners are useful in medical CC imaging of sites expressing (II). (I) and (II) are useful for treating CC disorders involving aberrant protein expression or biological activity. Criptophypetide and polymicleotide sequences have applications in CC diagnostics, forensics, gene mapping, identification of mutations in CC and to produce other types of data and products dependent on DNA and CC amino acid sequences. Ass64197-Ass94564 represent novel human CC diagnostic coding sequences of the invention.

CC Note: The sequence data for this patent did not appear in the printed CC specification, but was obtained in electronic format directly from WIPO CC at figure the companion of the products obtained in electronic format directly from WIPO CC at figure the companion of the companio

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The invention relates to polynucleotides encoding colon tumour proteins. The polynucleotides and encoded polypeptides are useful in pharmaceutical compositions, such as vaccines, for the diagnosis, prevention, and treatment of colon cancer. Polynucleotide sequences may be used as hybridisation probes or primers, and in the design and preparation of ribozyme molecules for inhibiting expression of tumour polypeptides and proteins in tumour cells. The compositions are useful for stimulating an immune response against cancer, particularly for the immunotherapy of colon cancer, and as markers for the progression of cancer.

ABK44450-ABK46237 represent coding sequences of human colon tumour
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           proteins of the invention. Note: With the exception of SEQ ID No 1 a for this patent did not form part of the supplied by the European Patent Office.

(GCA), by detecting the level of expression of gene(s) (Gs) identifies DNA chip analysis as given in the specification, and comparing the expression level to an expression level in an unactivated GC, where differential expression of Gs is indicative of GCA. Also included are modulating (M2) GA by contacting GC with an agent that alters the expression of at least one gene in Gs; (2) screening for an agent capable of modulating GCA or an inflammation (especially chronic) in a tissue, an allergic response in a subject, exposure of subject to a pathogen or sterile inflammatory disease using the
                                                                                                                            The in (GCA),
                                                                                                                                                                                                                    Detecting granulocyte activation by detecting differential expression of genes associated with granulocyte activation, which serves as diagnostic markers that is useful for monitoring disease states and

CC denote() in a tissue, an allergic response in a subject, exposure of a control of the trisue of a subject to a pathogen or sterile inflammatory disease, by detecting the control of expression in a sample of the tissue of gene(s) from Gs, where control of expression in a sample of the tissue of gene(s) from Gs, where control of expression in a sample of the tissue of gene(s) from Gs, where control of the gene is indicative of inflammation; (Sepecially chronic) or in a tissue, GC an allergic response in a subject, exposure of a subject to a pathogen control of the tissue. All is useful for detecting GCA; M2 is useful for condulating GA; M3 is useful for screening an agent capable of modulating GCA; M3 is useful for screening an agent capable of modulating GCA; M3 is useful for screening an agent to a pathogen or sterile of the tissue. M1 is useful for a tissue, M4 is useful for condulating GCA; M3 is useful for screening an agent capable of modulating GCA; M3 is useful for screening an agent capable of modulating GCA; M3 is useful for screening an agent capable of modulating GCA; M3 is useful for screening an agent capable of modulating GCA; M3 is useful for screening an agent capable of modulating GCA; M3 is useful for screening an agent capable of modulating GCA; M3 is useful for screening an agent capable of modulating GCA; M3 is useful for screening an agent day of the pathogen or sterile CCA; M3 is useful for screening GCA; M3 is useful for screening GCA; M3 is useful for capable of modulating GCA; M3 is useful for capable of M3 is useful for capable
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Query Match 33.9

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Qy
       The invention relates to a spatially-addressable set of single exon nucleic acid probes for measuring gene expression in a sample derived from human breast and BT 474 cells. The method involves contacting the probes with a collection of detectably labelled nucleic acids derived from muRN of human breast, and then measuring the label bound to each probe of the microarray. The probes are useful for verifying the expression of regions of genomic DNA predicted to encode proteins. They are useful for gene discovery, and for determining predisposition and/or prognosing breast disease. Gene expression analysis is useful for assessing the toxicity of chemical agents on cells. The microarray of this invention presents a far greater diversity of probes for measuring gene expression, with far less bias than expressed sequence tag microarrays. The method is suitable for present sequence is a single exon nucleic acid probe of the invention. Note: The sequence data for this parent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              04-FEB-2000; 2000US-0180312.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The present invention relates to single exon nucleic acid probes for measuring human gene expression in a sample derived from human heart. The present sequence is one such probe. The probes may be used for predicting, measuring and displaying gene expression in samples derived from the human heart via microarrays. By measuring gene expression, the probes are useful for predicting, diagnosing, grading, staging, monitoring and prognosing diseases of the human heart and vascular system e.g. cardiovascular disease, hypertension, cardiac arrhythmias and congenital heart disease, hypertension, cardiac arrhythmias and specification, but was obtained in electronic format directly from WIPO at fip.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     30-JAN-2001;

They can be used to measure gene expression in brain cell samples, which may enable the diagnosis and improved treatment of nervous system diseases such as Alzheimer's disease, multiple sclerosis, schizophrenia, epilepsy and cancers. The present sequence is one of the probes of the probes of the

                                                                                                                                                                                                       probes which are derived from genomic sequences expressed in the human bone marrow. They can be used to measure gene expression in bone marrow samples, which may enable the improved diagnosis and treatment of cancers such as lymphoma, leukaemia and myeloma. The present sequence is one of the probes of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    7239/c

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   681
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            348
```

The present invention relates to human single exon nucleic acid probes (SEMP). The present sequence is one such probes. The SEMPs are derived from human HeLa cells. The SEMPs can be used to produce a single exon microarray, which can be used for measuring human gene expression in a

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       sample derived from human cervical epithelial cells. By measuring gene expression, the probes are therefore useful in grading and/or staging of diseases of the cervix, notably cervical cancer. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at fig. wipo.int/pub/published_pct_sequences.

The present sequence is one such probe. The probes are useful for producing a microarray for predicting, measuring and displaying gene expression in samples derived from human placenta. The probes are useful for antenatal diagnosis of human genetic disorders.

                                                                                                                                                                                                                                                                                                                                                                                                          The present invention relates to novel single exon nucleic acid probes. The present sequence is one such probe. The probes are useful for measuring human gene expression in a human breast sample, where the prohybridises at high stringency to a nucleic acid expressed in the human breast. The probes are useful for predicting, diagnosing, grading, staging, monitoring and prognosing diseases of the human breast, particularly those diseases with polygenic aetiology. The diseases include: breast cancer, disorders of development, inflammatory diseases of the breast thorocystic changes, proliferative breast disease and non-carcinoma tumours.
                                                                                                                                                                                                                                                                                                                                                                           Note: The sequence data for this patent did not specification, but was obtained in electronic for at ftp.wipo.int/pub/published_pct_sequences.

The invention relates to a spatially-addressable set of single exon concleic acid probes for measuring gene expression in a sample derived from human lung comprising single exon nucleic acid probes having one of consider the last of sequences mentioned in the specification, or their complements or the 1287 open reading frames derived from the 12614 probes. Also included are a microarray comprising the novel set of probes which hybridise at high stringency to a concleic acid expressed in the human lung; measuring gene expression in a complement of detectably labeled nucleic acids derived from human lung comprising (a) contacting the array with a collection of detectably labeled nucleic acids derived from human lung measuring gene expression in a collection of detectably labeled nucleic acids derived from human lung measuring the array; identifying exons in a eukaryotic genome, comprising comparising comparising the label detectably bound to each probe of the array; identifying exons in a eukaryotic genome, comprising comparising comparising exons in a eukaryotic genome, comprising comparising comparising exons in a eukaryotic genome, comprising comparising comparising exons from genomic sequences comparising a fragment identical to the predicted exon, the probe is included comparising (a) identifying exons from genomic sequence by the method above and (b) measuring the expression of each of the exons in several comparising the expression of each of the exons in several comparising the expression of each of the exons in several comparising the expression of each of the exons in several comparising the expression of each of the exons in several comparising the expression of each of the exons in several comparising the expression of each of the exons in several comparising the expression of each of the exons in several comparising the expression of each of the exons in several comparising the expression of each of the exons in several comparising the expression of each of the exons in several comparising the expres
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Hermansky-Pudlak syndrome; sarcoidosis; pulmonary haemosiderosis; pulmonary histiccytosis; lymphangioleiomyomtosis; karagener syndrome; pulmonary alveolar proteinosis; fibrocystic pulmonary dysplasia; primary ciliary dyskinesis; pulmonary hypertension;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Spatially-addressable set of single exon nucleic acid measure gene expression in human lung samples -

cc expression of the exons in the tissues and/or cell types indicates that cf the exons should be assigned to a single gene; a peptide comprising one of 12011 sequences, mentioned in the specification, or encoded by the cc probes/open reading frames (ORF). The probes are used for gene cc expression analysis, and for identifying exons in a gene, particularly cc using human lung derived mRNA and for the study of lung diseases cs using human lung derived mRNA and for the study of lung diseases cc (COPD), interstitial lung disease (ILD), familial idiopathic pulmonary cf (COPD), interstitial lung disease (ILD), familial idiopathic pulmonary cc fibrosis, neurofibromatosis, tuberous scherosis, Gaucher's disease, cc haemosiderosis, pulmonary histocytosis, syndrome, sarcoidosis, pulmonary cc haemosiderosis, pulmonary histocytosis, syndrome, fibrocystic pulmonary alveolar proteinosis, Karagener syndrome, fibrocystic cand hyaline membrane disease. The present sequence is a single exon cc probe of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Best Local Similarity

The present sequence is one of a large number of 5' ESTS derived from CC mRNAs encoding Secreted proteins. No ORF has yet been conclusively cleantified within the present sequence. The 5' ESTS were prepared from CC identified within the present sequence. The 5' ESTS were prepared from CC total human RNAs or polyA+ RNAs derived from 3' untranslated region (UTR) CC sequences usually correspond mainly to the 3' untranslated region (UTR) CC of the mRNA because they are often obtained from oligo-dT primed cluna CC libraries. Such ESTS are not well suited for isolating cDNA sequences CC cerived from the 5' ends of mRNAs and even in those cases where longer CC codnA sequences have been obtained, the full 5' UTR is rarely included. CC codnA sequences have been obtained, the full 5' UTR is rarely included company to the sective of from mRNAs with intact 5' ends and can therefore be company to the section of the secti
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      QΥ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         В
